

**Navalwood Technology** offers a comprehensive and specialized service in the field of shipbuilding, manufacturing MODELS/PLUGS and One-off MOULDS machined by CNC

Our philosophy is based on the Do It Yourself (D.I.Y.) developing custom-made assembly KITS, which can be transported in conventional formats.

**ENGINEERING area**

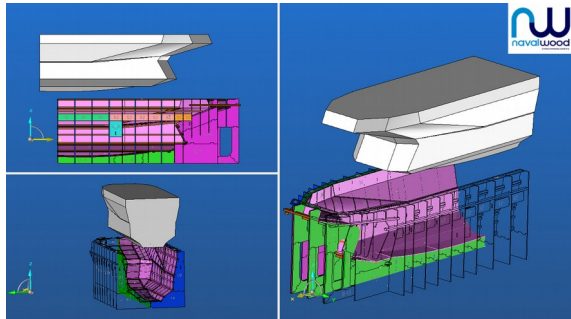

We have a technical department where the entire product is developed from the 3D file provided by the customer.

We have powerful tools in 3D design, which allows us to develop the entire project as a phase prior to CNC machining.

Assembly systems are designed as well as each of the pieces that make up the KIT.

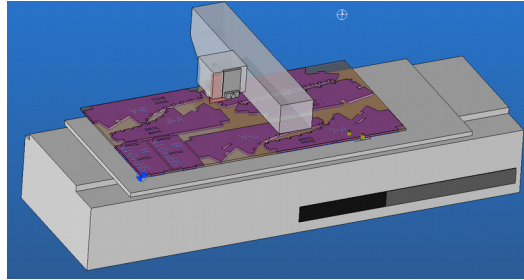

All parts are marked and identified on the assembly drawings.

**CNC machining**

We have a CNC milling center, where all parts are machined.

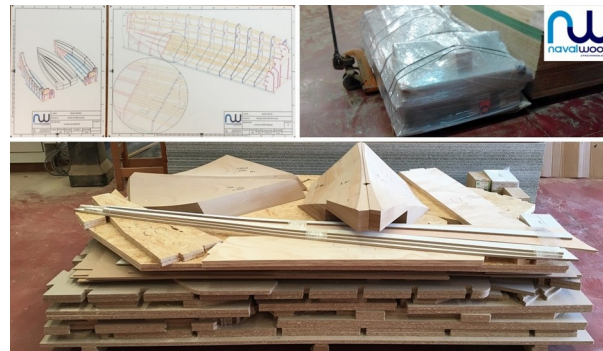

This process guarantees that the dimensions of the piece conform to reality.

**Palletized KIT**

After machining all parts are palletized.

Assembly drawings are prepared for the correct assembly as well as the guidelines to be followed during the assembly process.

**MODELS (plug)**

The model is used to manufacture the production molds. It's the best option in long series.

Model: RIB 8 mts

Model: RIB 8 mts

Trimaran 21 mts

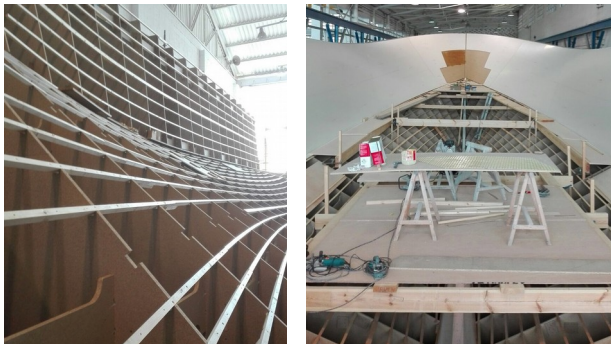

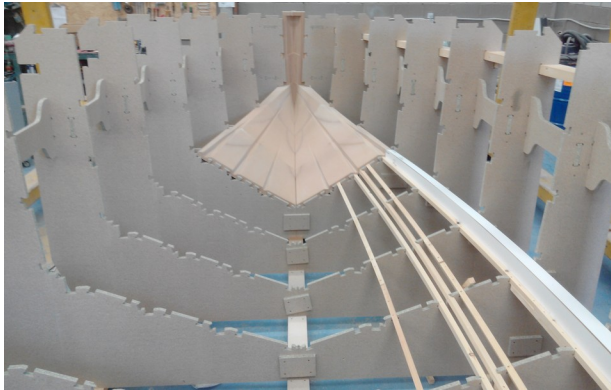

Government console

## One-off MOULDS

In very short series or to the unit (one-off) we offer the option of making the direct female mould.

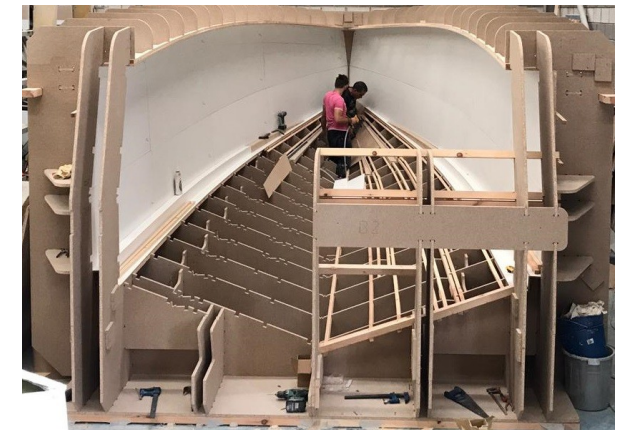

Advantages of manufacturing yours Models and Moulds with the kit system offered by Navalwood Technology;

- ✓ It allows to reduce costs, since the assembly is done by the customer.
- ✓ Reduce transport costs, since the merchandise is palletized and shipped in conventional formats.
- ✓ It allows an exact reproduction of the forms, since the machining of the pieces is done by CNC.
- ✓ Zero mounting errors, we eliminate the use of the measuring tape.
- ✓ All parts are marked, labeled and defined in the assembly drawings.
- ✓ Easy and fast assembly. Very schematic and intuitive drawings are supplied.
- ✓ Short delivery times
- ✓ Very competitive prices
